

# POV Outcomes

Executive Report

## The Bottom Line

As a high-growth niche player, Velocity View provides visual monitoring and security solutions focused on loss prevention in high-risk, high-visibility, industrial, construction, retail, and community environments. Our mobile security systems are self-contained environmentally friendly and can be deployed within hours with a small footprint.

Our ability to scale our business is highly dependent upon our dealers' and installation partners' capability to efficiently and accurately install our units at customer locations. We need to create and distribute instructional deployment protocols in a simple-to-access and easy-to-update tool that can be used across our dealer and partner networks.

**ROI | 823%**

**Payback | 6 months**

**Average annual benefit | \$1.4M**

## Our Solution

---

After a review of available applications, our team selected CareAR. This application provides three key advantages over other solutions:

1. Simplicity in capturing, creating, distributing, and maintaining instructional unit deployment and maintenance content.
2. Accessibility of content in digital formats among our dealers and partners.
3. Ability to visually verify installation accuracy, audit dealer/partner compliance, and integration of content with our field service ticketing system.

# The Proof of Value (POV)

---

Working with CareAR's POV team we conducted a six-week evaluation of the CareAR Platform, including Instruct, Experience Builder, and Assist. We engaged select dealer and partner teams to deploy and test CareAR's impact on three metrics:

1. Installation Compliance Accuracy – First-Time Unit Operational Compliance after 14 days
2. Efficiency / Install Task Verification Audit - Mean Time to Install
3. Dealer / Partner Experience – App Usability and User Satisfaction

**“We now accomplish tasks faster, more accurately, and with improved AR interaction from a dealer and partner enablement perspective. We have significantly reduced technician second and third-time deployments. CareAR Instruct allows us to better organize and share knowledge, and to validate data related to our maintenance operations quality, safety compliance, and reporting requirements. We now have an instructional reference tool that dealers and partners can access coupled with the ability to verify and audit install and service accuracy.”**

-Robert Frost,  
Field Services Senior Director Velocity View
